

DIGITAL7

digital access for all

15 % of French people suffer from illectronism, amongst which we notably find over **20 %** of the unemployed population and **60 % of our elders.** Our project aims at reducing this proportion as much as possible.

As a proof of inequalities in computer sciences domain between gender, around **18% of ENSEEIHT students are women.** Main reason of these inequalities are because of a autocensorship from young women when choosing their scholar orientation.

CONTEXT

As Computer Science students we are concerned by the lack of equal access to the digital technologies . We want to use our skills to give everybody the chance we were given.

1

OBJECTIVES

In today's digital world it becomes necessary increase access to digital technologies for everyone. Here are solutions we'd like to partake in :

2

REUSE

17% of household doesn't have a computer
We would like to help democratization of High-Tech reusage

3

EDUCATE

1.5% of over 15-years old do not have the basics of digital skills. Thus, we want to create workshops in order to give this people the required knowledge .

4

INFORM

Women represent 18% of the current SN students. We want to raise awareness within highschoools to promote STEM (science, technology, engineering and mathematics) careers for women. Here are association we want to work with.

5

Capitole
du Libre
